**LEVEL CONTROL SYSTEMS**

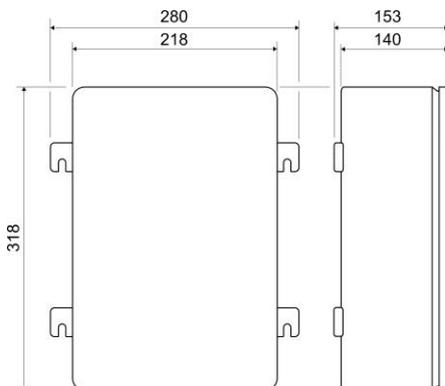

## Type AC1080/C

Conductivity HIGH or LOW  
Alarm with internal sounder and  
Mute facility

- *Remote Alarm*
- *Internal Sounder*

These units comprise 'AC' conductivity operated level control chassis and a type 1080 enunciator in a wall mounting enclosure. They provide HIGH or LOW level warning, as determined by the fail to safe switch position, with the following operating sequence. A green light indicates the normal condition. When an alarm sounds, a red light and an audible alarm replace it. Pressing an acceptance button mutes the alarm circuit, and an amber light replaces red to signify that an alarm condition persists, but the light sequence reverts to green and the alarm circuit resets. The lamps are sufficiently under-run to provide a long service life whilst still giving a bright display through polycarbonate lenses. Standard units have provision for control and a voltage free set of changeover contacts are fitted for this purpose. Any number of type 10 units can be connected into one remote alarm device, providing standard mains wiring practise is adhered to. On multi-station instalments, however, it becomes less expensive and more practical to use a purpose made alarm system. We manufacture them to suit any preferred requirement and have engineers who can advise on many alternative presentations available.

### Specification for Type 10 Series 1080/C

Mains Supply	110V or 240V single phase
Permissible Supply Variation	±10%
Indicator Lamps	Three; MES 12V
Level Controller Details	Refer to data sheet No 250

This product has been designed and complies to the relevant standards as listed in its certificate of conformity. The installer/user must ensure compliance.  
The crossed out bin symbol, placed on the product, reminds you of the need to dispose of the product correctly at the end of its life.  
Because of continuing development we reserve the right to change the specifications without notice
